### What is Fogging?

Fogging is a microbial technology that atomises solutions into a micro particle that is blown into the required areas, onto all touchable surfaces or hard to clean places.

### Effective Against:

SARS Corona Virus	Covid-19
Influenza-A	Clostridium Difficile
Hepatitis-B & C	Human Herpes
Staphylococcus Aureus (MRSA)	Mycobacterium Aium (TB)
Pseudomonas Aeruginosa	Human Norovirus
Escherichia coli	Listeria & Monocytogenes

Schools – minimum 1 900 sqm	Classrooms, halls and ablutions	R 5 557.82

## COVID – 19 Disinfection Fogging Services – Scope of Work

### Specialist High Level Disinfection

Service provided to customers who have had a suspected and/or confirmed case of COVID - 19 infection and within the last 72 hours

Scope of Work:

- Undertaken within 72 hours of confirmed or suspected COVID-19 reported case
- ULV (Ultra Low Volume) Fogging and physical disinfection using RBT Protectus Viridis Hand and Multi-Surface Disinfectant that is 99.999% Effective against Coronavirus and SARS-Co-V-2, has a two minute contact time, long lasting residual efficacy, water based and 100% biodegradable.
- Disinfection of all surface and touch points (door handles, handrails, door opening plates, light switches, taps, desks, remote controls, office equipment, keyboards, kitchen equipment and walls).
- Our application technicians undertake safety measures with key focus on their safety, your employees and the public.
- Should the Customer require the medical removal of potentially contaminated general waste, the Customer is to arrange and pay for such service from an appropriate waste service provider.
- A certificate for fogging services undertaken will be handed to the Customer.

Due to the need to physically validate the m<sup>2</sup> of the web on line purchase, Nyeleti Health will, prior to commencement of fogging services, validate the m<sup>2</sup> to be fogged. Should the validation identify a change in m<sup>2</sup>, a revised quotation will be provided to the Customer for written acceptance prior to commencement of fogging.

The variance between the web on-line m<sup>2</sup> purchase and the validated m<sup>2</sup> is required to be paid within 3 days of the revised quotation date.

If the Customer does not accept the revised quotation, the 40% advance payment will be refunded to the Customer less a Call Out charge of R 844.09.

### Precautionary Disinfection

Service provided to customers requiring a once-off precautionary disinfection of the premises when there are nil suspected nor confirmed COVID-19 cases.

Scope of Work

- ULV (Ultra Low Volume) Fogging and physical disinfection using RBT Protectus Viridis Hand and Multi-Surface Disinfectant that is 99.999% Effective against Coronavirus and SARS-Co-V-2, has a two minute contact time, long lasting residual efficacy, water based and 100% biodegradable.
- A certificate of services provided is issued to the Customer
- Our application technicians undertake safety measures with key focus on their safety, your employees and the public.
- Should the Customer require the medical removal of potentially contaminated general waste, the Customer is to arrange and pay for such service from an appropriate waste service provider.
- A certificate for fogging services undertaken will be handed to the Customer.

Due to the need to physically validate the m<sup>2</sup> of the web on line purchase, Nyeleti Health will, prior to commencement of fogging services, validate the m<sup>2</sup> to be fogged. Should the validation identify a change in m<sup>2</sup> a revised quotation will be provided to the Customer for written acceptance prior to commencement of fogging.

The variance between the web on-line m<sup>2</sup> purchase and the validated m<sup>2</sup>, is required to be paid within 3 days of the revised quotation date.

If the Customer does not accept the revised quotation, the 40% advance payment will be refunded to the Customer less a Call Out charge of R 758.92.
